

MIT9904-08: Haystack: Per-User Information Environments

David R. Karger

Project Overview

- Electronic infrastructure to triangulate knowledge
 - Of individual
 - Of colleagues
 - Of world
- Independent, interacting information repositories, customized to each user
 - Automated data gathering
 - Active observation of user activity
 - Adaptation to individual query needs
 - Inter-haystack collaboration

MIT9904-08: Haystack: Per-User Information Environments

David R. Karger

Progress Through June 2002

- Development of user interface
 - Data “self describes” how it should look
 - Ontology for representing such descriptions
 - Rendered translates data to screen
 - All data stored in data model
 - Display rules for new types can be edited or shared
- Applied ontology to viewing numerous types
 - People, documents, music, calendars
 - Collections: new techniques for navigating and refining
- Applications using object views
 - Photo organizer, music organizer, meeting planner

MIT9904-08: Haystack: Per-User Information Environments

David R. Karger

Research Plan for the Next Six Months

- Focused user studies
 - Examine how people manage collections
 - Compare different interfaces for performance, ease of use
- Broad user studies
 - Provide Haystack to a small number of users
 - Observe usage, refine system
- Machine learning agents
 - Develop data extractors, mail classifiers, recommenders
 - Incorporate semistructured data in learning process
